## Thermodynamics:

The study of the inter-relations bet<sup>n</sup> heat and other forms of energy is known as thermodynamics.

[Therm - heat; Dynamics - motion]

It is a branch of physics in which heat is mainly regarded as a form of mechanical energy.

### The first law of Thermodynamics:

The equivalence bet<sup>n</sup> heat and work has been called the 1<sup>st</sup> law of T.D. The law may be formally stated as follows - whenever mechanical work is completely converted into heat energy, for each unit of work that is converted into heat a definite quantity of heat is produced. Conversely, when heat energy is completely converted into mechanical work, for each unit of heat

1969 It is converted into work, a definite quantity of work is furnished.

In symbols if  $W$  units of work are completely converted into  $H$  units of heat energy then  $W \propto H$  or  $\frac{W}{H} = J$

where  $J$  is called the mechanical equivalent of heat. It is a universal constant.

Determination of  $J$ :

Few people can be happy unless they hate some other person, nation or creed.

Even when the Experts agree, the way will be mistaken.

The Fundamental defect of a father is that they want their children to be a credit to him.

The good life is one inspired by love and guided by knowledge.

The more we love and know, the more there is to be loved and known.

A well-ordered life is like climbing a ladder; the view half-way up is better than the view from the base, and it steadily becomes better as the ladder ascends.
